

DT-E15L4 Studio Monitor

January 2013

DT-E15L4 studio monitor

The DT-E15L4 is a cost-efficient LCD 15-inch high-end studio monitor with a fast TN panel and LED backlighting, reduced power consumption and improved lifespan. JVC has introduced the new DT-E series of monitors to provide a cost-effective option to the industry standard DT-VG1 high-end monitors. DT-E models feature fast TN panels with LED backlights, which provide improved contrast and black level and are also perfect for use as control and studio monitor.

Power consumption on the monitors is 20-30% lower compared to CCFL-driven lighting, increasing product lifetime by 300%. The imaging is also smoother and more consistent with LED backlighting. By saving energy costs we also avoid harming the environment, since the LED drive doesn't include harmful chemicals, compared to a CCFL backlight.

Furthermore the monitors support an in-monitor-display (IMD) based on the TSL protocol 4.0 (serially). The user interface of the DT-E series were designed multilingual (german, french, spanish, italian, russian). The audio-level meters for embedded digital audio has been expanded from 12 to 16 channels. JVC provides you with a free calibration software for achieving optimum picture quality.

Features:

- Fast 1366 x 768 TN panel - non-reflective
- HD-SDI and HDMI compatible
- Composite Video In/Out, Component Video In, Analog RGB Video In, HDMI In, HD/SD-SDI In/Out
- 3-Way stand for versatile installation
- Mercury-free LED Backlight
- IMD (In Monitor Display) function based on TSL's UMD protocol ver. 4.0
- 10bit color processing
- 16ch embedded audio with level indicator
- Remote: RS-232C x1; RJ-45 x3 (MAKE/TRIGGER, RS-485 In & Out)
- Other features:
 - 16.7 million display colors
 - Area/Center / Safety marker
 - LTC & VITC time code support
 - Built-In speakers
 - AC/DC Power Supply
 - Gloss high contrast panel (600:1 contrast ratio)
